DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-17, 21-36, 41-51, and 68-79, drawn to a semiconductor light emitting device for which the crystal plane is not parallel to the substrate plane.

Group II, claims 18-20, 37-40, 52, 66-67, and 80-82, drawn to a method for manufacture, including masking and selective area growth.

Group III, claims 53-65, drawn to a semiconductor light emitting device including multiple grown layers, cladding layers on the crystal surface plane, and a crystal surface plane which may be parallel to the substrate plane.

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Group I is directed to a device with the inventive concept of having a crystal layer with a crystal face slanted, or non-parallel, to the substrate surface plane, and an active layer extending parallel to the crystal layer.

Group III describes a different inventive concept, as it is directed to a similar device, but wherein the crystal face is not necessarily slanted with respect to the substrate surface plane, and wherein all of an active layer and several cladding layers are extending parallel to the crystal surface. Group III also includes that the crystal layer is grown on a second layer which is selectively grown.

Art Unit: 2813

Group II is directed toward a method of manufacturing a light-emitting device, using masking layers and selective crystal growth. The devices of group I, however, could be formed by growing the crystal material on the entire substrate, and then masking and etching, rather than performing masking followed by selective area growth. The devices of group III can be formed by a process which doesn't slant the crystal surface relative to the semiconductor substrate surface.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
